## General Notes

---

These tables were compiled using data from the 2019 National Survey of College Graduates (NSCG). The NSCG, conducted by the National Center for Science and Engineering Statistics within the National Science Foundation, is a repeated cross-sectional biennial survey that collects information on the nation's college-educated workforce. This survey is a unique source for examining the relationship between degree field and occupation, as well as examining other characteristics of college-educated individuals, including work activities, salary, and demographic information.

## Data Tables

### Fields of study of college graduates

Table	Title
1-1	College graduates, by level of highest degree, minor field of highest degree, and labor force status: 2019
1-2	Employed college graduates, by level of highest degree, minor field of highest degree, and major occupation: 2019
1-3	Relationship of highest degree to job among employed college graduates, by level of highest degree, minor field of highest degree, and broad occupation: 2019
1-4	Employed college graduates, by level of highest degree, minor field of highest degree, and detailed employment sector: 2019
1-5	Employed scientists and engineers, by sex, major field of highest degree, ethnicity, race, disability status, and type of disability: 2019

### Occupations of college graduates

Table	Title
2-1	Employed college graduates, by level of highest degree, major occupation, sex, ethnicity, race, and disability status: 2019
2-2	Full-time employed college graduates, by major occupation, age, level of highest degree, and sex: 2019
2-3	Full-time employed college graduates, by sex, major occupation, age, ethnicity, race, disability status, and citizenship status: 2019
2-4	Employed college graduates, by minor occupation and major field of highest degree: 2019
2-5	Employed college graduates, by major occupation, sex, ethnicity, race, disability status, and detailed employment sector: 2019
2-6	Employed college graduates, by level of highest degree, major occupation, possession of a certification or license, and primary field of certification or license: 2019

### Work activities and job satisfaction of employed college graduates

Table	Title
3-1	Employed college graduates, by level of highest degree, minor occupation, and primary work activity: 2019

Table	Title
<a href="#">3-2</a>	Employed college graduates, by employment sector, minor occupation, and job satisfaction: 2019
<a href="#">3-3</a>	Employed college graduates, by sex, major occupation, job satisfaction, and primary work activity: 2019
<a href="#">3-4</a>	Employed college graduates, by sex, major occupation, job satisfaction, and years since highest degree: 2019

## Median salaries of full-time employed college graduates

Table	Title
<a href="#">4-1</a>	Median salary of full-time employed college graduates, by major occupation, age, level of highest degree, and sex: 2019
<a href="#">4-2</a>	Median salary of full-time employed college graduates, by sex, major occupation, age, ethnicity, race, disability status, and citizenship status: 2019
<a href="#">4-3</a>	Full-time employed scientists and engineers and their median salary, by major field of highest degree, employment sector, and primary work activity: 2019

## Demographic characteristics of college graduates

Table	Title
<a href="#">5-1</a>	College graduates, by age, sex, ethnicity, race, disability status, and age at onset of disability, broad occupation, labor force status, and median salary: 2019
<a href="#">5-2</a>	College graduates, by broad occupation, labor force status, sex, ethnicity, race, and disability status: 2019
<a href="#">5-3</a>	College graduates, by broad field of highest degree, father's education, mother's education, level of highest degree, and median amount borrowed to finance undergraduate degree: 2019
<a href="#">5-4</a>	Employed college graduates, by nativity, level of highest degree, major occupation, and employment sector: 2019
<a href="#">5-5</a>	Employed foreign-born college graduates, by broad field of highest degree, place of birth, and broad occupation: 2019

## College graduates over time

Table	Title
<a href="#">6-1</a>	Employed scientists and engineers, by level of highest degree and minor field of highest degree: 2003–19

Table	Title
6-2	Employed college graduates, by sex, ethnicity, race, and major occupation: 2003–19
6-3	Employed college graduates, by sex, level of highest degree, and major occupation: 2003–19
6-4	Employed college graduates, by nativity, level of highest degree, and major occupation: 2003–19

TABLE 1-1

**College graduates, by level of highest degree, minor field of highest degree, and labor force status: 2019**

(Number)

Level and field of highest degree	Total	Employed				Unemployed <sup>a</sup>	Not in labor force <sup>b</sup>
		Total	S&E occupations	S&E-related occupations	Non-S&E occupations		
All degrees	64,696,000	50,524,000	7,466,000	8,893,000	34,165,000	1,633,000	12,538,000
S&E fields	19,662,000	15,362,000	5,709,000	2,131,000	7,522,000	534,000	3,766,000
Biological, agricultural, and environmental life sciences	3,186,000	2,437,000	705,000	660,000	1,072,000	75,000	675,000
Agricultural and food sciences	361,000	266,000	59,000	27,000	180,000	5,000	90,000
Biological sciences	2,453,000	1,867,000	565,000	588,000	714,000	64,000	523,000
Environmental life sciences	372,000	303,000	80,000	45,000	177,000	6,000	63,000
Computer and mathematical sciences	3,498,000	2,837,000	1,670,000	366,000	801,000	121,000	540,000
Computer and information sciences	2,606,000	2,203,000	1,427,000	239,000	537,000	91,000	312,000
Mathematics and statistics	892,000	634,000	243,000	127,000	265,000	29,000	229,000
Physical and related sciences	1,125,000	889,000	422,000	176,000	291,000	36,000	200,000

Non-S&E fields	1,647,000	1,428,000	21,000	19,000	1,388,000	24,000	195,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Unemployed includes individuals who were not working during the survey reference week but had been seeking work in the prior 4 weeks or who were on layoff from their job.

<sup>b</sup> Not in the labor force includes individuals who were not working during the survey reference week and had not been seeking work in the prior 4 weeks because of family responsibilities, chronic illness, or other reasons.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**  
Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Scientists and engineers are bachelor's and higher degreed individuals living in the United States employed in an S&E occupation. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**  
Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**  
Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Full-time employed college graduates are individuals working 35 or more hours per week on their principal job. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Includes medical schools and university-affiliated research institutes.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

TABLE 3-1

**Employed college graduates, by level of highest degree, minor occupation, and primary work activity: 2019**

(Number)

Level of highest degree and occupation	Total	Primary work activity				
		Computer applications	Management and administration <sup>a</sup>	Research and development <sup>b</sup>	Teaching	Other <sup>c</sup>
Professional	2,903,000	9,000	401,000	70,000	83,000	2,339,000
S&E occupations	67,000	7,000	10,000	16,000	8,000	26,000
S&E-related occupations	1,380,000	D	82,000	10,000	28,000	1,258,000
Non-S&E occupations	1,456,000	D	309,000	44,000	47,000	1,055,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Management and administration includes respondents who reported the following work activities: accounting, finance, or contracts; human resources; quality or productivity management; sales and marketing; or managing and supervising.

<sup>b</sup> Research and development includes basic research, applied research, and development. "Design" is no longer included in the definition of "research and development"; it is now included as part of "Other work activities."

<sup>c</sup> Other work activities includes the design of equipment, processes, structures, and models; production, operations, and maintenance; professional services; and other activities not broken out separately.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

Other non-S&E occupations	1,843,000	790,000	839,000	183,000	31,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Business or industry includes self-employed individuals, nonprofit organizations, and other unspecified types of employers. Education includes 4-year colleges and universities, medical schools, university-affiliated research institutes, 2-year colleges, precollege institutions, and other educational institutions. Government includes federal (civilian), military, state, and local employers.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Management and administration includes respondents who reported the following work activities: accounting, finance, or contracts; human resources; quality or productivity management; sales and marketing; or managing and supervising.

<sup>b</sup> Research and development includes basic research, applied research, and development. "Design" is no longer included in the definition of "research and development"; it is now included as part of "Other work activities."

<sup>c</sup> Other work activities includes the design of equipment, processes, structures, and models; production, operations, and maintenance; professional services; and other activities not broken out separately.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&amp;E = science and engineering.

**Note(s):**

Median salaries are rounded to the nearest \$1,000. Full-time employed college graduates are individuals working 35 or more hours per week on their principal job.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Median salaries are rounded to the nearest \$1,000. Full-time employed college graduates are individuals working 35 or more hours per week on their principal job. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&amp;E = science and engineering.

<sup>a</sup> Management and administration includes respondents who reported the following work activities: accounting, finance, or contracts; human resources; quality or productivity management; sales and marketing; or managing and supervising.<sup>b</sup> Research and development includes basic research, applied research, and development. "Design" is no longer included in the definition of "research and development"; it is now included as part of "Other work activities."<sup>c</sup> Other work activities includes the design of equipment, processes, structures, and models; production, operations, and maintenance; professional services; and other activities not broken out separately.**Note(s):**

Population counts are rounded to the nearest 1,000. Detail may not add to total because of rounding. Median salaries are rounded to the nearest \$1,000. Scientists and engineers are bachelor's and higher degreed individuals living in the United States employed in an S&E occupation. Persons are considered to be employed full time if they are working 35 or more hours per week on their principal job. Four-year educational institution includes medical schools and university-affiliated research institutes. Government includes federal (civilian), military, state, and local employers.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Unemployed includes individuals who were not working during the survey reference week but had been seeking work in the prior 4 weeks or who were on layoff from their job.

<sup>b</sup> Not in the labor force includes individuals who were not working during the survey reference week and had not been seeking work in the prior 4 weeks because of family responsibilities, chronic illness, or other reasons.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Median salaries are rounded to the nearest \$1,000. Designation of full-time and part-time employment status is based on principal job only, not on all jobs held in labor force. For example, an individual could work part time in his or her principal job but full time in the labor force. Full time is based on working 35 or more hours per week on one's principal job. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&amp;E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. This table does not include individuals who have never worked for pay or profit. If respondent was not employed during survey reference period, occupation when last employed was reported. Designation of full-time and part-time employment status is based on principal job only, not on all jobs held in labor force. For example, an individual could work part time in his or her principal job but full time in the labor force. Full time is based on working 35 or more hours per week on one's principal job. All individuals who report working part time on their principal job, regardless of their preference for working part time, are asked their reasons for working part time. All individuals who report not working, regardless of if they are looking for work, are asked their reasons for not working. Hispanic or Latino may be any race; race categories exclude Hispanic origin. The National Survey of College Graduates asks the degree of difficulty—none, slight, moderate, severe, or unable to do—an individual has in seeing (with glasses), hearing (with hearing aid), walking without assistance, lifting 10 pounds, or concentrating, remembering, or making decisions. Those respondents who answered "moderate," "severe," or "unable to do" for an activity were classified as having a disability.

**TABLE 5-3**

**College graduates, by broad field of highest degree, father's education, mother's education, level of highest degree, and median amount borrowed to finance undergraduate degree: 2019**

(Number)

[illegible]

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**  
Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Totals for master's, doctorate, and professional highest degree earners include individuals who did not earn an undergraduate degree. These are primarily individuals who earned a first degree at an international institution for which the award is not counted as an undergraduate award by U.S. standards.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

<sup>a</sup> Four-year educational institution includes medical schools and university-affiliated research institutes.

<sup>b</sup> Government includes federal (civilian), military, state, and local employers.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. For each broad degree field, data are presented for the 25 countries with the largest numbers of foreign-born college graduates employed in the United States during the survey reference week. Data include non-U.S. citizens who are on permanent or temporary visas.

Management and administration fields	3,000	3,000	3,000	S	4,000	9,000
Education, except science and math teacher education	12,000	8,000	7,000	6,000	5,000	8,000
Social service and related fields	3,000	8,000	14,000	13,000	9,000	15,000
Sales and marketing fields	D	D	D	D	D	D
Art and humanities fields	3,000	S	4,000	5,000	4,000	5,000
Other non-S&E fields	6,000	10,000	14,000	15,000	19,000	16,000
Professional	49,000	58,000	64,000	63,000	67,000	67,000
S&E fields	13,000	16,000	27,000	22,000	24,000	28,000
S&E-related fields	20,000	20,000	22,000	16,000	20,000	18,000
Non-S&E fields	15,000	22,000	15,000	24,000	24,000	21,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Scientists and engineers are bachelor's and higher degreed individuals living in the United States employed in an S&E occupation.

**Source(s):**

National Center for Science and Engineering Statistics, National Survey of College Graduates.

TABLE 6-2

**Employed college graduates, by sex, ethnicity, race, and major occupation: 2003–19**

(Number)

Sex, ethnicity, race, and occupation	2003	2010	2013	2015	2017	2019
Both sexes	32,574,000	40,623,000	43,839,000	45,941,000	48,223,000	50,524,000

TABLE 6-2

**Employed college graduates, by sex, ethnicity, race, and major occupation: 2003–19**

(Number)

Sex, ethnicity, race, and occupation	2003	2010	2013	2015	2017	2019
Biological, agricultural, and other life scientists	199,000	228,000	242,000	241,000	218,000	227,000
Computer and mathematical scientists	1,004,000	1,210,000	1,319,000	1,504,000	1,584,000	1,740,000
Physical and related scientists	176,000	184,000	170,000	169,000	194,000	196,000
Social and related scientists	190,000	183,000	188,000	168,000	186,000	185,000
Engineers	1,037,000	975,000	984,000	1,041,000	1,027,000	1,114,000
S&E-related occupations	1,864,000	2,297,000	2,317,000	2,363,000	2,412,000	2,562,000
Non-S&E occupations	9,770,000	10,833,000	11,309,000	11,427,000	11,423,000	11,240,000
More than one race	193,000	252,000	292,000	432,000	396,000	490,000
S&E occupations	41,000	51,000	61,000	72,000	73,000	100,000
Biological, agricultural, and other life scientists	3,000	5,000	6,000	5,000	5,000	7,000
Computer and mathematical scientists	18,000	26,000	35,000	41,000	38,000	60,000
Physical and related scientists	2,000	3,000	2,000	2,000	3,000	3,000
Social and related scientists	3,000	4,000	3,000	3,000	4,000	3,000
Engineers	15,000	14,000	16,000	21,000	23,000	27,000
S&E-related occupations	27,000	29,000	52,000	56,000	48,000	76,000
Non-S&E occupations	126,000	172,000	180,000	305,000	276,000	313,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding. Hispanic or Latino may be any race; race categories exclude Hispanic origin.

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

**Note(s):**

Numbers are rounded to the nearest 1,000. Detail may not add to total because of rounding.

Non-S&E occupations	5,382,000	6,718,000	7,049,000	7,635,000	7,623,000	8,160,000
Doctorate	920,000	1,001,000	1,053,000	1,105,000	1,197,000	1,337,000
S&E occupations	392,000	412,000	424,000	433,000	447,000	518,000
Biological, agricultural, and other life scientists	99,000	109,000	105,000	110,000	112,000	127,000
Computer and mathematical scientists	50,000	53,000	53,000	49,000	62,000	75,000
Physical and related scientists	63,000	68,000	68,000	64,000	61,000	70,000
Social and related scientists	129,000	142,000	152,000	162,000	160,000	186,000
Engineers	51,000	40,000	47,000	49,000	51,000	60,000
S&E-related occupations	89,000	138,000	157,000	141,000	164,000	231,000
Non-S&E occupations	439,000	451,000	472,000	531,000	586,000	588,000
Professional	1,920,000	2,280,000	2,323,000	2,431,000	2,532,000	2,432,000
S&E occupations	37,000	41,000	37,000	45,000	48,000	46,000
Biological, agricultural, and other life scientists	10,000	7,000	4,000	6,000	6,000	6,000
Computer and mathematical scientists	10,000	5,000	7,000	12,000	8,000	9,000
Physical and related scientists	S	D	D	*	2,000	2,000
Social and related scientists	14,000	28,000	23,000	23,000	30,000	28,000
Engineers	2,000	D	2,000	4,000	S	3,000
S&E-related occupations	815,000	922,000	978,000	1,076,000	1,088,000	1,082,000
Non-S&E occupations	1,068,000	1,317,000	1,309,000	1,310,000	1,396,000	1,304,000

\* = suppressed when population estimate < 500. D = suppressed to avoid disclosure of confidential information. S = suppressed for reliability; coefficient of variation exceeds publication standards.

S&E = science and engineering.

National Center for Science and Engineering Statistics, National Survey of College Graduates.

## Technical Notes

---

### Survey Overview

*Purpose.* The National Survey of College Graduates (NSCG) provides data on the characteristics of the nation's college graduates, with a focus on those in the science and engineering (S&E) workforce. It samples individuals who are living in the United States during the survey reference week, have earned at least a bachelor's degree, and are younger than 76. By surveying college graduates in all academic disciplines, the NSCG provides data useful in understanding the relationship between college education and career opportunities, as well as the relationship between degree field and occupation.

The NSCG is designed to provide demographic, education, and career history information about college graduates and to complement another S&E-focused survey conducted by the National Center for Science and Engineering Statistics (NCSES): the Survey of Doctorate Recipients (SDR, <https://www.nsf.gov/statistics/srvydoctoratework/>). These two surveys share a common reference date, and they use similar questionnaires and data processing guidelines.

These technical notes provide an overview of the 2019 NSCG. Complete details are provided in the 2019 NSCG Methodology Report, available upon request from the NSCG Survey Manager.

*Data collection authority.* The information collected in the NSCG is solicited under the authority of the National Science Foundation Act of 1950, as amended, and the America COMPETES Reauthorization Act of 2010. The Census Bureau collects the NSCG data, on behalf of NCSES, under the authority of Title 13, Section 8 of the United States Code. The Office of Management and Budget control number is 3145-0141.

*Survey contractor.* Census Bureau

*Survey sponsor.* NCSES.

*Major changes to the recent survey cycle.* Beginning with the 2019 cycle, the NSCG's target population was modified to exclude residents of U.S. outlying areas. This change was made to better align the survey's target population with the coverage of the NSCG sampling frame, the American Community Survey (ACS). The ACS coverage includes residents of the 50 states, the District of Columbia, and Puerto Rico. Hence, starting with the 2019 NSCG, sample members living in U.S. outlying territories other than Puerto Rico are no longer considered part of the target population.

### Key Survey Information

*Frequency.* Biennial.

*Initial survey year.* 1993.

*Reference period.* The week of 1 February 2019.

*Response unit.* Individual.

*Sample or census.* Sample.

*Population size.* Approximately 64.7 million individuals.

*Sample size.* Approximately 147,000 individuals.

### Survey Design

*Target population.* The NSCG target population includes individuals who meet the following criteria:

- Earned a bachelor's degree<sup>1</sup> or higher prior to 1 January 2018

- Are not institutionalized and reside in the United States or Puerto Rico as of 1 February 2019
- Are younger than 76 years as of 1 February 2019

*Sampling frame.* Using a rotating panel design, the 2019 NSCG includes new sample cases from the 2017 ACS and returning sample cases from the 2017 NSCG.

The NSCG sampling frame for new sample cases included the following eligibility requirements:

- Were residing in the United States or Puerto Rico as of the ACS interview date
- Were noninstitutionalized as of the ACS interview date
- Had earned at least a bachelor's degree as of the ACS interview date
- Would be under the age of 76 as of 1 February 2019
- Did not have an inaccurate name or incomplete address on the ACS data file

Returning sample cases from the 2017 NSCG originated from three different frames (the 2011 ACS, 2013 ACS, and 2015 ACS) and had the following eligibility requirements:

- Were a complete interview or temporarily ineligible during their initial NSCG survey cycle
- Would be under the age of 76 as of 1 February 2019
- Were not a hard refusal during the 2017 NSCG survey cycle

*Sample design.* The NSCG sample design is cross-sectional with a rotating panel element. As a cross-sectional study, the NSCG provides estimates of the size and characteristics of the college graduate population for a point in time. As part of the rotating panel design, every new panel receives a baseline survey interview and three biennial follow-up interviews before rotating out of the survey.

The NSCG uses a stratified sampling design to select its sample from the eligible sampling frame. In the new sample, cases in the S&E strata were selected using systematic sampling, and cases in the non-S&E strata were selected with probability proportional to size (PPS) sampling.<sup>2</sup>

Among the returning sample, all eligible cases were selected. The sampling strata were defined by the cross classification of the following four variables:

- Young graduate oversample group eligibility indicator (2 levels)
- Demographic group (9 levels)
- Highest degree type (3 levels)
- Detailed occupation group (25 levels, with over half in S&E)

As was the case in the 2017 NSCG, the 2019 NSCG includes an oversample of young graduates to improve the precision of estimates for this important population. The 2019 NSCG includes approximately 147,000 sample cases drawn from the following:

- Returning sample from the 2013 NSCG who were originally selected from the 2011 ACS
- Returning sample from the 2015 NSCG who were originally selected from the 2013 ACS
- Returning sample from the 2017 NSCG who were originally selected from the 2015 ACS
- New sample selected from the 2017 ACS

Approximately 81,000 cases were selected from the returning sample members for one of the three biennial follow-up interviews that are part of the rotating panel design. For the baseline survey interview, about 66,000 new sample cases were selected from the 2017 ACS.

### **Data Collection and Processing Methods**

*Data collection.* The data collection period lasted approximately 7 months (25 April 2019 to 22 November 2019). The NSCG used a trimodal data collection approach: self-administered online survey (Web), self-administered paper questionnaire (via mail), and computer-assisted telephone interview (CATI). Individuals in the sample generally were started in the Web mode, depending on their available contact information and past preference. After an initial survey invitation, the data collection protocol included sequential contacts by postal mail, e-mail, and telephone that ran throughout the data collection period. At any time during data collection, sample members could choose to complete the survey using any of the three modes. Nonrespondents to the initial survey invitation received follow-up contacts via alternate modes.

Quality assurance procedures were in place at each data collection step (e.g., address updating, printing, package assembly and mailing, questionnaire receipt, data entry, CATI, coding, and post-data collection processing).

*Mode.* About 85% of the participants completed the survey by Web, 10% by mail, and 5% by CATI.

*Response rates.* Response rates were calculated on complete responses, that is, from instruments with responses to all critical items. Critical items are those containing information needed to report labor force participation (including employment status, job title, and job description), college education (including degree type, degree date, and field of study), and location of residency on the reference date. The overall unweighted response rate was 65%; the weighted response rate was 68%. Of the roughly 147,000 persons in the 2019 NSCG sample, 92,537 completed the survey.

*Data editing.* Response data had initial editing rules applied relative to the specific mode of capture to check internal consistency and valid range of response. The Web survey captured most of the survey responses and had internal editing controls where appropriate. A computer-assisted data entry (CADE) system was used to process the mailed paper forms. Responses from the three separate modes were merged for subsequent coding, editing, and cleaning necessary to create an analytical database.

Following established NCSES guidelines for coding NSCG survey data, including verbatim responses, staff were trained in conducting a standardized review and coding of occupation and education information, certifications, “other/specify” verbatim responses, state and country geographical information, and postsecondary institution information. For standardized coding of occupation (including auto-coding), the respondent's reported job title, duties and responsibilities, and other work-related information from the questionnaire were reviewed by specially trained coders who corrected respondents’ self-reporting errors to obtain the best occupation codes. (See [technical table A-2](#) for a list and classification of coded occupations reported in the NSCG.) For standardized coding of field of study associated with any reported degree (including auto-coding), the respondent’s reported department, degree level, and field of study information from the questionnaire were reviewed by specially trained coders who corrected respondents’ self-reporting errors to obtain the best field of study codes. (See [technical table A-1](#) for a list and classification of coded fields of study reported in the NSCG.)

*Imputation.* Logical imputation was primarily accomplished as part of editing. In the editing phase, the answer to a question with missing data was sometimes determined by the answer to another question. In some circumstances, editing procedures found inconsistent data that were blanked out and therefore subject to statistical imputation.

The item nonresponse rates reflect data missing after logical imputation or editing but before statistical imputation. For key employment items—such as employment status, sector of employment, and primary work activity—the item nonresponse rates ranged from 0.0% to 0.6%. Nonresponse to questions deemed sensitive was higher: nonresponse to salary and earned income was 4.9% and 7.2%, respectively, for the new sample members and 4.6% and 7.3%, respectively, for the returning members. Personal demographic data of the new sample members had variable item nonresponse rates, with sex at 0.00%, birth year at 0.03%, marital status at 0.3%, citizenship at 0.3%, ethnicity at 1.1%, and race at 2.8%. The nonresponse rates for returning sample members were 0.7% for marital status and 0.8% for citizenship.

Item nonresponse was typically addressed using statistical imputation methods. Most NSCG variables were subjected to hot-deck imputation, with each variable having its own class and sort variables chosen by regression modeling to identify nearest neighbors for imputed information. For some variables, there was no set of class and sort variables that was reliably related to or suitable for predicting the missing value, such as day of birth. In these instances, random imputation was used, so that the distribution of imputed values was similar to the distribution of reported values without using class or sort variables.

Imputation was not performed on critical items or on verbatim-based variables. In addition, for some missing demographic information, the NSCG imported the corresponding data from the ACS, which had performed its own imputation.

*Weighting.* Because the NSCG is based on a complex sampling design and subject to nonresponse bias, sampling weights were created for each respondent to support unbiased population estimates. The final analysis weights account for several factors, including the following:

- Adjustments to account for undercoverage of recent immigrants and undercoverage of recent degree-earners
- Adjustment for incorrect names or incomplete address information on the sampling frame
- Differential sampling rates
- Adjustments to account for non-locatability and unit nonresponse
- Adjustments to align the sample distribution with population controls
- Trimming of extreme weights
- Overlap procedures to convert weights that reflect the population of each individual frame (2011 ACS, 2013 ACS, 2015 ACS, and 2017 ACS) into a final sample weight that reflects the 2019 NSCG target population

The final sample weights enable data users to derive survey-based estimates of the NSCG target population. The variable name on the NSCG public use data files for the NSCG final sample weight is WTSURVY.

*Variance estimation.* The successive difference replication method (SDRM) was used to develop replicate weights for variance estimation. The theoretical basis for the SDRM is described in Wolter (1984) and in Fay and Train (1995). As with any replication method, successive difference replication involves constructing numerous subsamples (replicates) from the full sample and computing the statistic of interest for each replicate. The mean square error of the replicate estimates around their corresponding full sample estimate provides an estimate of the sampling variance of the statistic of interest. The 2019 NSCG produced 320 sets of replicate weights. Please contact the NSCG Survey Manager to obtain the NSCG replicate weights and the replicate weight user guide.

*Disclosure protection.* To protect against the disclosure of confidential information provided by NSCG respondents, the estimates presented in NSCG data tables are rounded to the nearest 1,000.

Data table cell values based on counts of respondents that fall below a predetermined threshold are deemed to be sensitive to potential disclosure, and the letter “D” indicates this type of suppression in a table cell.

## Survey Quality Measures

*Sampling error.* NSCG estimates are subject to sampling errors. Estimates of sampling errors associated with this survey were calculated using replicate weights and are available upon request from the NSCG Survey Manager. Data table estimates with coefficients of variation (that is, the estimate divided by the standard error) that exceed a predetermined threshold are deemed unreliable and are suppressed. The letter “S” indicates this type of suppression in a table cell.

*Coverage error.* Coverage error occurs in sample estimates when the sampling frame does not accurately represent the target population and is a type of nonsampling error. Any missed housing units or missed individuals within sample households in the ACS would create undercoverage in the NSCG. Additional undercoverage errors may exist because of self-reporting errors in the NSCG sampling frame that led to incorrect classification of individuals as not having a bachelor's degree or higher when in fact they held such a degree.

*Nonresponse error.* The weighted response rate for the 2019 NSCG was 68%; the unweighted response rate was 65%. Analyses of NSCG nonresponse trends were used to develop nonresponse weighting adjustments to minimize the potential for nonresponse bias in the NSCG estimates. A hot deck imputation method was used to compensate for item nonresponse.

*Measurement error.* The NSCG is subject to reporting errors from differences in interpretation of questions and by modality (Web, mail, CATI). To reduce measurement errors, the NSCG questionnaire items were pretested in focus groups and cognitive interviews.

## Data Comparability and Changes

*Data comparability.* Year-to-year comparisons of the nation's college-educated population can be made among the 1993, 2003, 2010, 2013, 2015, 2017, and 2019 survey cycles because many of the core questions remained the same. Because the 1995, 1997, 1999, 2006, and 2008 surveys do not provide full coverage of the nation's college-educated population, comparisons between these cycles and other cycles should be limited to those individuals educated in S&E fields or employed in S&E occupations. Also, because of the use of different reference months in some survey cycles, seasonal differences may occur when making comparisons across years. Thus, use caution when interpreting cross-cycle comparisons.

There is overlap in the cases included in the 2010 NSCG through the 2017 NSCG and in the 2013 NSCG through the 2019 NSCG (see [figure 1](#)). The overlap among cases allows for longitudinal analysis of a subset of the NSCG sample using restricted use data files within NCSES' Secure Data Access Facility (SDAF). Cases can be linked across survey years using a unique identification variable and single-frame weights are available for each survey year, allowing for the evaluation of estimates from each frame independently. If you are interested in applying for a license to access restricted use NSCG data via the SDAF, please visit [NCSES Restricted-Use Data Procedures Guide](#). Moreover, the Census Bureau offers NSCG restricted use data files that include a few additional data elements. These files can be accessed via the [Federal Statistical Research Data Centers](#).

### *Changes in survey sampling*

- Starting with the 2010 survey cycle, the NSCG has used a rotating panel sample design in which a new sample is selected every survey cycle from the most recent ACS and the cases are followed over four survey cycles. After the fourth cycle, the cases rotate out of the NSCG and are replaced by a newly selected panel of cases from the most recent ACS.
- Beginning in the 2013 cycle, NCSES discontinued the National Survey of Recent College Graduates (NSRCG) and expanded the sample of young college graduates in the NSCG. The 2010 NSRCG sample cases were carried forward through the 2015 NSCG survey cycle as the NSCG transitioned to a design that included a young college graduate oversample.

- **Figure 1** summarizes the NSCG rotating panel design and the sample sizes for the 2010 through 2019 NSCG survey cycles. Each new NSCG survey cycle adds new cases from the most recent ACS survey year to offset the rotating out of the oldest NSCG panel.

FIGURE 1

**Rotating panel design and sample sizes for the National Survey of College Graduates: 2010–19**

(Returning sample and new sample)

Year	Cohort/panel			
2010	Returning sample		New sample	
	2008 NSCG and NSRCG ( $n \approx 35,000$ )		2009 ACS ( $n \approx 65,000$ )	
2013	Returning sample		New sample	
	2010 NSRCG ( $n \approx 13,000$ )	2009 ACS ( $n \approx 47,000$ )	2011 ACS ( $n \approx 83,000$ )	
2015	Returning sample			New sample
	2010 NSRCG ( $n \approx 13,000$ )	2009 ACS ( $n \approx 23,000$ )	2011 ACS ( $n \approx 57,000$ )	2013 ACS ( $n \approx 42,000$ )
2017	Returning sample			New sample
	2009 ACS ( $n \approx 23,000$ )	2011 ACS ( $n \approx 28,000$ )	2013 ACS ( $n \approx 25,000$ )	2015 ACS ( $n \approx 48,000$ )
2019	Returning sample			New sample
	2011 ACS ( $n \approx 27,500$ )	2013 ACS ( $n \approx 24,500$ )	2015 ACS ( $n \approx 29,000$ )	2017 ACS ( $n \approx 66,000$ )

NSCG = National Survey of College Graduates; NSRCG = National Survey of Recent College Graduates; ACS = American Community Survey

**Note(s):**

During a panel's second survey cycle (in which it is part of the returning sample for the first time), its members include individuals who responded or who were temporarily ineligible during the first cycle. During a panel's third and fourth cycles, its members include all respondents, nonrespondents, and temporarily ineligible cases from the preceding cycle. Beginning in 2013, the NSCG transitioned to a design that includes an oversample of young graduates to improve the precision of estimates for this important population.

**Source(s):**

National Center for Science and Engineering Statistics, National Science Foundation, National Survey of College Graduates.

**Changes in questionnaire**

- 2019. The content of the 2019 NSCG questionnaire remained unchanged from the 2017 NSCG version.
- 2017. The 2017 NSCG questionnaire added two new questions about U.S. military veteran status that are asked on the ACS.
- 2015. The 2015 NSCG questionnaire added a section on professional certifications and licenses.
- 2013. The 2013 NSCG questionnaire added questions about attendance at community colleges, amounts borrowed to finance undergraduate and graduate degrees, and sources of financial support for undergraduate and graduate degrees. The 2013 questionnaire also differed from the 2010 questionnaire by splitting the first response category for the indicator of sample member location on the survey reference date into two categories. "United States, Puerto Rico, or another U.S. territory" became "United States or Puerto Rico" and "Another U.S. territory."

- 2010. The 2010 NSCG questionnaire added items on components of job satisfaction, importance of job benefits, year of retirement, whether employer is a new business, and degree of difficulty concentrating, remembering, or making decisions.

#### *Changes in reporting procedures*

- In past years, NSCG data were combined with data from the SDR and the NSRCG to form the Scientists and Engineers Statistical Data System (SESTAT). The last series of tables produced from SESTAT used 2013 NSCG data. Since then, NSCG data have been used as a sole source in numerous tables for NCSES's two congressionally mandated reports (*Science and Engineering Indicators* and *Women, Minorities, and Persons with Disabilities in Science and Engineering*).

#### *Changes in microdata*

- NSCG public use data files can no longer be linked across cycles. The NSCG public use data files now include a case identifier (OBSNUM), which is a random number for each case in each cycle.

## Definitions

**Field of degree.** NSCG respondents are asked to report each degree they have earned at the bachelor's level or higher, along with the major field of study for each degree. The 2019 NSCG used a taxonomy of 142 "detailed" fields of study from which respondents could select the field that best represented their major. These 142 "detailed" fields of study were aggregated into 31 "minor" fields, 7 "major" fields, and 3 "broad" fields (S&E, S&E-related, and non-S&E). *S&E fields of degree* are those included in the following five major categories: (1) computer and mathematical sciences; (2) biological, agricultural, and environmental life sciences; (3) physical sciences; (4) social sciences; and (5) engineering. *S&E-related fields of degree* are those included in the following four categories: (1) health, (2) science and mathematics teacher education, (3) technology and technical fields, and (4) other S&E-related fields. (See [technical table A-1](#) for a list and classification of fields of degree reported in the NSCG.)

**Full-time and part-time employment.** Full-time (working 35 hours or more per week) and part-time (working less than 35 hours per week) employment status is for the principal job only and not for all jobs held in the labor force. For example, an individual who works part time in his or her principal job but full time in the labor force would be tabulated as part-time.

**Highest degree level.** NSCG respondents report the degrees they have earned at the bachelor's level (e.g., BS, BA, AB), master's level (e.g., MS, MA, MBA), and doctorate level (e.g., PhD, DSc, EdD), as well as other professional degrees (e.g., JD, LLB, MD, DDS, DVM). Because the NSCG is focused on the S&E workforce, the sampling strategy does not include a special effort to select individuals with professional degrees. As such, there is not always sufficient data for the professional degrees to be reported separately in the tables.

**Occupation data.** The occupational classification of the respondent was based on his or her principal job (including job title) held during the reference week—or on his or her last job held, if not employed in the reference week (survey questions A5 and A6 as well as A16 and A17). Also used in the occupational classification was a respondent-selected job code (survey questions A7 and A18). *S&E occupations* are those included in the following five major categories: (1) computer and mathematical scientists; (2) biological, agricultural, and other life scientists; (3) physical scientists; (4) social scientists; and (5) engineers. S&E-related occupations require science and technology expertise but are not part of the five major categories of S&E occupations. *S&E-related occupations* are those included in the following five categories: (1) health-related occupations, (2) S&E managers, (3) S&E precollege teachers, (4) S&E technicians and technologists, and (5) other S&E-related occupations. (See [technical table A-2](#) for a list and classification of occupations reported in the NSCG.)

*Race and ethnicity.* Ethnicity is defined as Hispanic or Latino or not Hispanic or Latino. Values for those selecting a single race include American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, and White. Those persons who report more than one race and who are not of Hispanic or Latino ethnicity also have a separate value.

*Research and development (R&D).* The definition of R&D used by NCSES changed recently to align more closely with international guidance. In NCSES publications, R&D had included the work activities of (1) basic research, (2) applied research, (3) development, and (4) the design of equipment, processes, structures, and models. Starting with the 2019 NSCG, the design activity was excluded such that R&D is now defined as including the work activities of (1) basic research, (2) applied research, and (3) development. (For details on the rationale behind changing the R&D definition and the resulting impact, see NCSES InfoBrief *Measuring R&D Workers Using NCSES Statistics*, available at <https://ncses.nsf.gov/pubs/nsf21335>.)

*Salary.* Median annual salaries are reported for the principal job, rounded to the nearest \$1,000, and computed only for individuals employed full time. For individuals employed by educational institutions, no accommodation was made to convert academic year salaries to calendar year salaries.

*Science and engineering (S&E) workforce.* Individuals working in an S&E or S&E-related occupation or who earned an S&E or S&E-related degree and are working in a non-S&E occupation.

*Scientists and engineers.* The NSCG data tables use a narrow definition of scientists and engineers based solely on occupation: individuals employed in an S&E occupation. In other NCSES publications, the definition of scientists and engineers may be broadened to include individuals employed in S&E-related occupations, as well as individuals who may not be working in an S&E or S&E-related occupation but who earned an S&E or S&E-related degree.

*Sector of employment.* Employment sector is a derived variable based on responses to questionnaire items A13, A14, and A15. In the data tables, the category 4-year educational institution includes 4-year colleges or universities, medical schools (including university-affiliated hospitals or medical centers), and university-affiliated research institutes. Two-year and pre-college institutions include community colleges, technical institutes, and other educational institutions (which respondents reported verbatim in the survey questionnaire). For-profit business or industry includes respondents who were self-employed in an incorporated business. Self-employed includes respondents who were self-employed or were a business owner in a non-incorporated business.

TABLE A-1

## Fields of study used in the NSCG data tables

(Crosswalk)

Broad field (e.g., NDGMEBG)		Major field (e.g., NDGMEMG)		Minor field (e.g., NDGMENG)		Detailed field (e.g., N2DGRMED)	
Code	Label	Code	Label	Code	Label	Code	Label
						438940	General psychology
						438950	Industrial/ organizational psychology
						438960	Social psychology
						438970	Other psychology
				44	Sociology and anthropology	449210	Anthropology and archaeology
						449220	Criminology
						449290	Sociology
				45	Other social sciences	456200	Area and ethnic studies
						457710	Linguistics
						458610	Philosophy of science
						459240	Geography
						459300	Other social sciences, including history of science <sup>b</sup>
		5	Engineering	51	Aerospace, aeronautical, and astronautical engineering	517210	Aerospace, aeronautical, and astronautical/ space engineering
				52	Chemical engineering	527250	Chemical engineering
				53	Civil and architectural engineering	537230	Architectural engineering
						537260	Civil engineering
				54	Electrical and computer engineering	547270	Computer and systems engineering
						547280	Electrical, electronics, and communications engineering
				55	Industrial engineering	557330	Industrial and manufacturing engineering
				56	Mechanical engineering	567350	Mechanical engineering
				57	Other engineering	577220	Agricultural engineering
						577240	Bioengineering and biomedical engineering
						577290	Engineering sciences, mechanics and physics
						577300	Environmental engineering
						577310	Engineering, general
						577340	Materials engineering, including ceramics and textiles
						577360	Metallurgical engineering
						577390	Nuclear engineering
						577410	Other engineering, including geophysical, geological, mining, mineral, naval architecture, marine, and petroleum <sup>c</sup>
2	S&E-related fields	6	S&E-related fields	61	Health	617810	Audiology and speech pathology
						617820	Health services administration
						617830	Health/ medical assistants
						617840	Health/ medical technologies
						617850	Medical preparatory programs (e.g., pre-dentistry, pre-medical, pre-veterinary)
						617860	Medicine (dentistry, optometry, osteopathic, podiatry, veterinary)
						617870	Nursing (4 years or longer program)
						617880	Pharmacy
						617890	Physical therapy and other rehabilitation/ therapeutic services

TABLE A-1

## Fields of study used in the NSCG data tables

(Crosswalk)

Broad field (e.g., NDGMEBG)		Major field (e.g., NDGMEMG)		Minor field (e.g., NDGMENG)		Detailed field (e.g., N2DGRMED)	
Code	Label	Code	Label	Code	Label	Code	Label
				62	Science and mathematics teacher education	617900	Public health (including environmental health and epidemiology)
						617910	Other health/ medical sciences
						627020	Computer teacher education
						627060	Mathematics teacher education
						627090	Science teacher education
						627120	Social science teacher education
				63	Technology and technical fields	636720	Computer programming
						636750	Data processing
						637510	Electrical and electronic technologies
						637520	Industrial production technologies
						637530	Mechanical engineering-related technologies
						637540	Other engineering-related technologies
				64	Other science and engineering-related fields	646100	Architecture/ environmental design
						646520	Actuarial science
3	Non-S&E fields	7	Non-S&E fields	71	Management and administration fields	716020	Other agricultural business and production
						716510	Accounting
						716530	Business administration and management
						716540	Business, general
						716550	Business and managerial economics
						716570	Financial management
						716590	Other business management/ administrative services
				72	Education, except science and math teacher education	727010	Education administration
						727030	Counselor education and guidance services
						727050	Elementary teacher education
						727070	Physical education and coaching
						727080	Pre-school/ kindergarten/ early childhood teacher education
						727100	Secondary teacher education
						727110	Special education
						727130	Other education
				73	Social service and related fields	738620	Other philosophy, religion, theology
						739100	Social work
				74	Sales and marketing fields	746560	Business marketing/ marketing management
						746580	Marketing research
				75	Art and humanities fields	757600	English language, literature and letters
						757720	Other foreign languages and literature
						758200	Liberal arts/ general studies
						759260	History, other
						759410	Dramatic arts
						759420	Fine arts, all fields
						759430	Music, all fields
						759440	Other visual and performing arts
				76	Other non-S&E fields	766610	Communications, general
						766620	Journalism

						782210	Food preparation and service occupations
						782220	Protective services
						782230	Other service occupations, except health
						783000	Other teachers and instructors
						784010	Construction and extraction occupations
						784020	Installation, maintenance, and repair occupations
						784030	Precision/ production occupations
						784050	Transportation and material moving occupations
						785000	Other occupations

S&amp;E = science and engineering; NSCG = National Survey of College Graduates.

<sup>a</sup> This label was revised in 2019.<sup>b</sup> "Oceanographers" were merged with "Geologists, including earth scientists" to form "Geologists, including earth scientists and oceanographers" (321940).<sup>c</sup> "Astronomers" were separated from "Physicists and astronomers" to form "Physicists" (33).<sup>d</sup> "Astronomers" were merged with "Other physical scientists" to form "Other physical scientists, including astronomers" (341980).<sup>e</sup> "Sociologists" were separated from "Sociologists and anthropologists" to form "Anthropologists" (44).<sup>f</sup> "Sociologists" were merged with "Other social scientists" to form "Other social scientists, including sociologists" (452380).<sup>g</sup> "Agricultural engineers" and "Mining and geological engineers" were merged with "Other engineers" to form "Other engineers, including agricultural, mining, and geological" (570990).<sup>h</sup> "Technologists and technicians in the mathematical sciences" were merged with "Technologists and technicians in the physical sciences" to form "Technologists and technicians in the mathematical or physical sciences" (641970).**Source(s):**

National Center for Science and Engineering Statistics, National Survey of College Graduates: 2019.

## Notes

---

- 1 “Bachelor’s degrees” include equivalent undergraduate academic degrees awarded by colleges and universities in countries that may name their degrees differently.
- 2 With PPS sampling, the probability of selection was proportional to the ACS final person-level weight, adjusted to account for imputed educational attainment, incomplete addresses, or invalid names.

## Acknowledgments and Suggested Citation

---

### Acknowledgments

Lynn Milan of the National Center for Science and Engineering Statistics (NCSES) developed and coordinated this report under the leadership of Emilda B. Rivers, NCSES Director; Vipin Arora, NCSES Deputy Director; and John Finamore, NCSES Chief Statistician. Jock Black (NCSES) reviewed the report.

Under NCSES contract with SRI International, the SRI International team led by Paul Liu and Claire Lecornu compiled the tables in this report. Data and publication processing support was provided by Devi Mishra, Christine Hamel, Tanya Gore, Joe Newman, and Rajinder Raut (NCSES).

NCSES thanks the college graduates who participated in the NSCG for their time and effort in generously contributing to the information included in this report.
